1.4 Three Laws of Thermodynamics 1st law: Total energy of the system plus the surrounding is conserved. Most text books use the following internal energy change ( $dU$ ) assuming surrounding stays the same. It is no kinetic energy, no potential energy and no friction loss, which is reliable for the reversible process only.

Thermodynamics is a branch of physics that deals with heat and temperature, and their relation to energy, work, radiation, and properties of matter. The behavior of these quantities is governed by the four laws of thermodynamics which convey a quantitative description using measurable macroscopic physical quantities, but may be explained in terms of microscopic constituents by statistical ...
