

Other operating systems (OS) will display similar messages: The installation of update "com.ibm.director.core.console.director.feature\_6.3.4" is a prerequisite for the installation of update "com.ibm.director.core.manager.aix\_6.3.5" Impact: An ISD server cannot be updated to 6.3.5, when UM is used to obtain the updates from IBM

**IBM IT02836: IBM Systems Director Server 6.3.5 update ...**

In IBM Systems Director 6.3.2 or FSM (Flex System Manager), after discovering and unlocking a CMM (Chassis Management Module) of a PureFlex System and deploying a generic protocol configuration to set the Director server as the notification recipient, notifications are not being received from an IBM Flex System FC5022 16Gb SAN Scalable Switch within the chassis.

**SNMPv3 Notifications Configuration for the IBM Flex System ...**

An improperly configured managed DB2 database or database user might prevent IBM Systems Director server from connecting to its database. The managed DB2 database should authenticate the database user (dirinst1) locally, not via a network domain server. Dirinst1 should have local Administrator access, and it must not have an expired password.

**IBM Managed DB2 Database Authorizations in a Windows Domain**

IBM® Case Manager, Version 5.2, is an advanced case management product that unites information, process, and people to provide the 360-degree view of case information and achieve optimized outcomes. With IBM Case Manager, knowledge workers can extract critical case information through integrated business rules, collaboration, and analytics.
