livelihoods and forest resources management at watershed level in the semiarid forests (woodlands) of Persian oak (*Quercus persica*) in southwest Iran. The ultimate

Livelihood Dependency and Management on Semiarid Oak Forests

There is a high dependency of inhabitants' livelihoods on the woodland resources. The woodland-based incomes in Ganaveh are obtained by performing animal grazing, and collection of fuel wood, seeds, and ground fodder. The more income diversification and the better educational conditions for households, the less dependency on these resources.

livelihoods. The livelihood dependency of local communities provides one of the main challenges for PA management. The management authorities face a trade off between livelihood dependency and biodiversity conservation. This trade-off arises since the livelihoods of local communities have recently been recognized as a human rights issue.

Empirical evidence from Nepal. Bhim Adhikari. The relationship between household socio-economic attributes and forest dependency has become a growing concern in issues of local level collective action. On one hand, it has been argued that poor people extract more resources from the communal forest due to their greater reliance on natural resources.
