premature infants with RDS; the shunt can result in congestive heart failure and apnea. Necrotizing enterocolitis /NEC/ - ischemic injury to intestinal mucosa, often complicated by bowel necrosis and perforation, causing abdominal distention, bloody diarrhea, apnea, acidosis, and septic shock.

PEDIATRIC ANESTHESIA MANUAL 2 - Infomed

Ventriculoperitoneal (VP) shunt involves diversion of cerebrospinal fluid (CSF) from the ventricular system to the peritoneal cavity at a rate determined by the characteristics of the valve device. When the rate at which the CSF enters the cavity is higher than its capacity to absorb it is overwhelmed, ascitis can occur, with abdominal distension and increase in intraperitoneal pressure.

Burst abdomen following ventriculoperitoneal shunt placement

This installation guide is very important for correct operation of the BMV-501. Please read this carefully to avoid battery monitor malfunction and/or fire hazards. In addition to the BMV-501 battery monitor and the 500A/50mV current shunt (supplied as standard), you will need a two wire flexible connection

1 doctor agreed: CT scan: Pain in the abdominal area in patients with vp shunt may indicate a sub clinical infection of the shunt leading to cyst formation. A ct scan of the abdomen can determine if this cyst is present.

Sharp abdominal pain following vp shunt revision - Tips

...

At the proximal end the shunt valve can become blocked due to the buildup of excess protein in the CSF. The extra protein will collect at the point of drainage and slowly clog the valve. The shunt can also become blocked at the distal end if the shunt is pulled out of the abdominal cavity (in the case of VP shunts), or from similar protein buildup.
