Sotos syndrome is a rare genetic disorder characterized by excessive

physical growth during the first years of life. Excessive growth often starts in infancy and continues into the early teen years. The disorder may be accompanied by autism, mild intellectual disability, delayed motor, cognitive, and social development, hypotonia (low muscle tone), and speech impairments.

### **Sotos syndrome - Wikipedia**

Sindrom izgaranja na poslu („burnout“) više je od umora i ne odnosi se samo na svakodnevni stres na poslu. Praćen je hroničnom iscrpljenošću, frustriranošću i osećanjem bespomoćnosti. Oni koji pate od ovog sindroma postaju bezvoljni, gube motivaciju i postižu slabije rezultate na poslu.

Rett Syndrome affects one in every  
10,000 - 15,000 live-born female babies  
in all racial and ethnic groups worldwide.  
What causes Rett Syndrome? Rett  
Syndrome is caused by a MECP2 gene  
mutation. Since the disorder usually  
occurs spontaneously, there is less than  
a 1% risk of another child in the same  
family being born with Rett Syndrome.
