Solved: Viruses And Bacteria Critical Thinking "Work-Alike ...

Viruses are only 'active' within host cells which they need to reproduce, while bacteria are single-celled organisms that produce their own energy and can reproduce on their own. Bacteria serve many vital roles in nature outside of being infectious.

Virus vs. Bacteria: What is the Difference? | Merriam-Webster

1. virus attaches to host cell & inserts genetic material 2. virus either becomes latent or active 3. when active, virus's genetic material takes over host cell and directs it to make more viruses. 4. new viruses are releases as host cell bursts and is destroyed. 5. viruses find other cells to infect.

Science - Chapter 7 - Lesson 3 - What are viruses ...

The biggest difference between viruses and bacteria is that viruses must have a living host - like a plant or animal - to multiply, while most bacteria can grow on non-living surfaces. Bacteria are intercellular organisms (i.e. they live in-between cells); whereas viruses are intracellular organisms (they infiltrate the host cell and live inside the cell).
